Professional Summary

Computer Science student building **Full-stack and AI-powered applications** that solve real-world problems. Hands-on with **React.js, Node.js, Express.js, MongoDB, and PostgreSQL**, with **400+ DSA problems solved** and a **9.05 CGPA**. Strong foundation in **data structures, algorithms, OOP, DBMS, authentication, and scalable backend design**.

Technical Skills

Languages: C++, Python, JavaScript, TypeScript
Core CS: Data Structures and Algorithms, OOP, DBMS, Operating Systems, Computer Networks
Frontend: React.js, Next.js, Vite, Tailwind CSS, Shadcn UI, HTML5, CSS3
Backend and APIs: Node.js, Express.js, RESTful APIs, JWT Authentication, HTTP-only Cookies, Bcrypt, Zod
Databases and Caching: MongoDB, Mongoose, PostgreSQL, Prisma ORM, Redis, Elasticsearch
AI/ML: Machine Learning, NLP, OpenAI API, NumPy, Pandas, Matplotlib, Optuna
Tools and Cloud: Git, GitHub, Docker, Vercel, ImageKit, Postman, Jest, Supertest, Vitest

Experience & Training

Full-Stack Developer — NK Enterprises June–August 2026

- Developed a full-stack **MERN e-commerce application** to digitize an offline retail store, implementing product discovery, cart management, and **dynamic SEO metadata**.
- Integrated the **Razorpay payment API** and built an admin dashboard for inventory and order tracking, **improving order-processing efficiency by 40%**.
- Improved frontend performance with debounced search and **React.lazy code splitting**, achieving a **1.5-second initial page load**, wrote Jest, Supertest, and Vitest suites with **90%+ test coverage** across critical flows.

Industry Training in AI & Machine Learning — Winovation Services Pvt. Ltd. May–July 2025

- Applied Python, OOP, NumPy, and Pandas to build and evaluate **supervised and unsupervised ML models**, including clustering and hyperparameter tuning.
- Evaluated **8 ML models on 185 monthly records** and deployed a forecasting system using **Docker and Streamlit**, optimized **170+ configurations** with Optuna Bayesian Optimization, **improving R^2 by 41.7%** and **reducing RMSE by 35.4%** versus the linear baseline.

Projects

ProResume AI — AI-Powered Resume Ranking System Live Demo

- Engineered an **AI-powered resume analyzer** using React, Node.js, Express, and an **LLM evaluation pipeline** to assess ATS compatibility, identify skill gaps, and generate job-specific recommendations.
- Developed a **deterministic scoring engine** across five dimensions, normalizing AI-generated assessments into a standardized **100-point score**.
- Built a **web-scraping job discovery engine** using Cheerio and Axios to extract relevant vacancies from public listings based on candidate skills and location.

OutSkill — Automated Email Queue & Slack Dispatcher Live Demo

- Architected a **fault-tolerant asynchronous email system** using Node.js, TypeScript, BullMQ, and Redis, processing **1,000+ jobs across 15 concurrent workers** with automated retries, interrupted-job recovery, and **Redis rate limiting (100 emails/hour per sender)**; integrated Gmail API (OAuth 2.0) for delivery and Slack OAuth 2.0 alerts for failures.
- Optimized backend performance with Express.js REST APIs, Prisma ORM, and **PostgreSQL indexing**; implemented **Elasticsearch search with PostgreSQL fallback** and built a Next.js dashboard to monitor job execution and system activity.

Reel Food — Short-Video Food Ordering Platform Live Demo

- Engineered a full-stack food discovery and ordering platform with a **60 FPS reels feed**, restaurant discovery, cart, checkout, and **payment gateway integration**.
- Implemented REST APIs and **secure JWT authentication** with MongoDB/Mongoose, Bcrypt, and ImageKit for backend data operations and media delivery.

Education

B.Tech, Computer Science & Engineering — Bhagwan Parshuram Institute of Technology, Delhi 2023–2027
CGPA: **9.05/10**
